

ECOM4SAP

ECOM4SAP is a set of services capable of integrating with online stores via their official API and automating the data transfer to SAP Business One via the SAP SDK.

The main benefits of enabling this automation are:

- **No Errors:** manual-data-entry errors/typos are eliminated
- **Quick:** products, orders and customer information are kept in-sync quickly and automatically

The services can:

- Download **customer** data into SAP
- Upload **customer** changes from SAP back into the web store
- Upload **product** information into the web store
- Download **orders** according to the business field mapping requirements and/or business processes
- Upload the **order status** from SAP into the store once it gets a delivery note (with or without carrier & tracking numbers)

Depending on what your business is utilizing, we support the following API connections

Magento	Shopify	PrestaShop	eBay
---------	---------	------------	------
